This website is the home of the National Disability Insurance Agency's (NDIA) data and research outputs.

We provide detailed information and data about the NDIS on this website. We do this to make sure participants, their families and carers, advocates, researchers, policy makers and the general public can find out more about the Scheme and how it is working.

We also conduct and publish research and evaluations to support positive participant outcomes by ensuring policies, practices and priorities are informed by trustworthy and robust evidence.

Our data and information

We share data through:

- The Explore Data tool that lets you customise your search.
- Datasets that provide participant, provider and market data.
- Detailed reports and analysis.

We share information about a range of topics using data drawn from NDIS systems, including:

- Participant dashboards that examine data on a range of common disability types in the NDIS.
- Markets, providers and payments data.
- Outcomes updates for participants, their families and carers.
- Specialist Disability Accommodation reports and data.
- Deep dives on employment, health and wellbeing, young people and their experience with the Scheme.
- Corporate reporting, including supplementary data to the Quarterly Report to Disability Ministers and other technical analysis.

Discover more about how the NDIA shares data through the Data Sharing Policy .

Our research and evaluations

We have categorised our research and evaluations into focus areas:

- Decision making for participant pathways
- Early interventions
- High-volume cohorts
- Home and living
- Market stewardship and employent
- Improving the NDIS.

We also share guides to help participants and their families:

- Get the information they need to get the most out of their plans.
- Receive best practice supports and services that help them pursue their goals.
- Access improved and to innovate supports.

We also partner with academic institutions and research bodies to support our research and evaluation activities.
